

# Diagnosis of *Aloe* × *buzairiensis* J. Lodé 2011

Joël Lodé (Spain)

In the article of Cactus-Adventures n°85, January, 2010 concerning the description of the nothotaxon *Aloe* × *buzairiensis* from the Island of Socotra, the diagnosis was not included: here it is, thus allowing to validate the description.

## Diagnosis

Planta inter *Aloe perryi* et *A. squarrosam*, ex hybridatione harum genita, characteribus ambarum, epidermis caerulescenti *A. perryi* simili maculata que *A. squarrosa* simili. Inflorescentia ejus *A. squarrosa* affinis, sed floribus rubris, caulibus robustis erectis. Crescit inter collibus in dumetis *Buxi hildebrandtii*.

**Holotypus** : in regione occidentale insulae Socotra (Jabal Buzairi, 764m alt.). Lecta ab Joël Lodé 26 oct 2009. (Herb. Fundación Joël Lodé n°1230512, Cuevas del Almanzora, Almería, Spain).

## ACKNOWLEDGEMENTS

I thank Katherine Challis, of Royal Botanic Gardens, Kew, who was kind enough to draw my attention on the absence of diagnosis for this nothotaxon, as well as Guillermo Pino who kindly made the translation of the diagnosis in Latin.
